

Zetafax Business Edition

Zetafax provides an easy to manage, 'all in the box' network fax solution for 5 to 25 network users.

The Zetafax Business Edition is the Equisys entry level network fax software for 5 to 25 network users. It is an 'all in the box' software solution that can be installed on existing hardware and is very easy to manage.

The Business Edition includes:

- A single Zetafax Server
- License for 5, 10 or 25 users
- Support for two local fax lines
- Email Gateway
- Zetafax Client
- Web Client
- DDI and DID routing of inbound faxes
- Microsoft Office and Outlook addins
- Queue management
- Remote monitoring
- Report writing

Users can write, address and send faxes with little or no training using the intuitive Zetafax Client. Integration with Microsoft Outlook and Lotus Notes also allows users to send faxes in the same way as they would an email, increasing productivity.

Fast and easy to install

Zetafax is easy to install, using the installation and configuration wizard and MSI install. For larger deployments, Administrators can choose the centralized client installation option which uses Group Policy. The optional Zetafax Automation Toolkit is available for integrating Zetafax with other business applications such as accounting and contact management systems.

Easy to use

Writing, addressing and sending faxes and text messages using Zetafax requires little or no training. Users can choose from a range of intuitive fax interfaces including the Microsoft Outlook style Zetafax client, Microsoft Outlook, Lotus Notes, or SMTP email clients. Faxes can also be addressed using the Outlook address book.

Cost-effective and straightforward management

Zetafax is stable and reliable, so it requires little support. However, if needed, technical support is available via Equisys UK and US offices and our international distributors. Customers can receive software upgrades and updates through our Software Assurance scheme.

Benefits

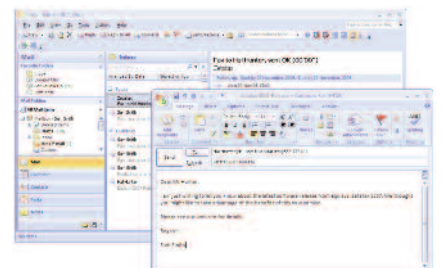

'All-in-the-box': provides complete network fax solution for 5 to 25 network users

Easily integrated with existing software systems

Fast and straightforward to install

Reliable software, supporting the latest platforms and technologies

Includes email gateway and one year's Software Assurance

Sending a fax from Microsoft Outlook using the Zetafax Email Gateway is as easy as sending an email.

User feature highlights

- Intuitive fax client with address book, system tray alert, preview pane and customizable shortcuts
- Ability to fax direct from Microsoft Office documents, Email Client, Web Client and any application enabled with the optional Zetafax Automation Toolkit
- PDF document conversion, for forwarding of inbound faxes to any PC user
- Advanced embedded addressing feature for automatic personalization of mailmerge faxes
- Multi-doc feature for combining multiple documents such as letters and spreadsheets into a single fax
- Automatic redial if busy and auto-printing of failed faxes
- Choice of addressing options from the integrated Microsoft Outlook address book and Zetafax private and public address books

Administrator feature highlights

- Choice of manual or automated routing of inbound faxes to individual PCs and network printers
- Support for the latest platforms, including Windows 8.1, Windows Server 2012 R2, Microsoft Exchange 2010, Microsoft Office 2013 and Lotus Domino 8.5

- Support for virtualization platforms, including VMware ESXi 4.0, vSphere Suite, and Microsoft Hyper-V
- Support for Group Policy, allowing centralized installation of multiple clients
- Reporting module provides full fax log records, charge codes, audit trails and archiving features
- Fax queue management for aborting or rushing of faxes
- Remote fax server monitoring
- Allows automatic user account creation
- Range of fax hardware supported including V.34 modems, intelligent fax boards and ISDN controllers
- Full support for Fax over IP (FoIP) and server virtualization via the Zetafax FoIP Connector
- DDI and DID routing of inbound faxing
- Active Directory integration: the Zetafax Client checks Active Directory for the server's location, so no client reconfiguration is needed at the desktop
