

Zetafax email gateway for Lotus Domino

The Zetafax email gateway integrates with Lotus Domino, giving users the ability to send and receive faxes like email via their Lotus Notes workspace.

The Zetafax email gateway is a standard component of all Zetafax systems. By making fax an integral part of the email client environment, faxing is quicker, easier and more intuitive. The desktop is easier to manage, requiring fewer interface installations, which means savings on training and support overheads. In this way, total cost of ownership (TCO) of Zetafax is kept to a minimum.

Send and receive faxes just like email

The Zetafax email gateway gives Lotus Domino users the convenience of sending and receiving email and fax messages from one common interface – their Notes workspace. There is no need to install a separate fax client program, although it is available if needed.

Address faxes using the Notes address book

Faxes can be addressed using the Notes address book by selecting single or multiple recipients. The Zetafax email gateway sends the fax, notifying the sender of success or failure.

Automatic conversion of documents to fax attachments

Zetafax converts documents such as word processor or spreadsheet files into faxable TIFF files so they can be faxed as attachments. The Zetafax Document Conversion module runs the appropriate application at the fax server and instructs the application to ‘print’ the attachment using the Zetafax printer driver.

Send messages via multiple channels

Messages can be addressed to fax and email recipients. With the Zetafax SMS Gateway add-on, you can also send SMS messages to mobile phone users via the Zetafax Client.

Receiving faxes direct to the desktop

The email gateway can work with the Zetafax Direct Inward Dialing (DID) feature to deliver faxes directly to all users’ Lotus Notes Inbox – just like email. If preferred, faxes can be delivered to a nearby network printer.

Benefits

- Send and receive fax messages in familiar Lotus Notes workspace environment
- Attach files such as word processor and spreadsheet documents
- Receive email notification of successful and failed faxes
- Delivery of inbound faxes direct to email Inbox
- Easy to install on the Lotus Domino server

Easy to install and manage

Installation is very straightforward. Having set up the fax foreign domain and router mailbox on the Lotus Domino server, simply select the Notes or Windows domain user accounts which are to be enabled for faxing.

The router mailbox passes any email addressed for faxing to the Zetafax server. Here, the fax server's mail submitter module examines the message and converts attachments into TIFF format suitable for faxing.

Microsoft Office and PDF files are supported as standard. For less common file types, the optional Zetafax Document Conversion add-on converts over 250 file types to TIFF format.
