

Zetafax Device Edition

Centralized fax management for multifunctional printers. Zetafax reduces costs and provides easy traceability of all incoming and outgoing faxes

“ Zetafax has developed perfectly with our business, and I reckon we've had our money's worth many times over

Mark Bradley, IT Manager
Bradford & Bingley International

”

When your business has several multifunctional printers, faxing can be difficult. Costly external telephone lines and additional fax cards must be added to each printer; disparate archives and user logs make recharging departments and auditing difficult; and the lost time spent by staff sending, filing and retrieving faxes can soon mount up.

Zetafax Device Edition combines the ease of faxing from multifunctional printers with the capabilities of a fax server, making fax management simpler, faster and more cost effective:

- ▶ **Reduce telephony costs** – Zetafax Device Edition removes the need to connect fax cards and telephone lines directly to multifunctional devices - reducing expenditure
- ▶ **Detailed fax records** – message archives and user permissions are controlled centrally - providing fast, secure access to authorized personnel when required
- ▶ **No more waiting by printers** – copies of incoming faxes and delivery reports can be sent directly to your email inbox, saving staff time and frustration

Reduce the cost of faxing

Zetafax Device Edition removes the need to add a telephone line and fax card to every fax-enabled printer. Instead, a single fax delivery point is created by connecting your printers to the Zetafax Server via the Local Area Network (LAN), consolidating costs, reducing complexity and saving you money.

Improved archival and traceability

Support your compliance requirements and manage recharging costs more easily. Zetafax provides a comprehensive range of logging and fax archiving features that provide visibility of activity for each user, including a central log of all sent and received faxes. Access can be tightly controlled to maintain data security and confidentiality.

Receive faxes to your email inbox

Respond to customer faxes more quickly. Incoming faxes to your organization can be sent directly to a chosen printer or to your email inbox, saving staff time and reducing paper and toner usage.

Zetafax Device Edition benefits:

- ▶ **Reduce costs** – save money by removing the need to connect external telephone lines and fax cards to multifunctional printers
- ▶ **Secure message archive** – all sent and received faxes are stored centrally for easy, secure retrieval
- ▶ **Increase control** – comprehensive permissions enable fax access on a per user basis
- ▶ **Save time** – incoming faxes and delivery confirmations can be sent directly to a printer or email inbox
- ▶ **Designed to fit your business** – advanced solutions compatible with Voice over IP and virtualized environments

Send, then walk away

When a fax is submitted from your device you can walk away with confidence because faxes are automatically queued, prioritized and retried when the line is busy. Once delivery is complete, a confirmation message and a copy of the fax are sent directly to the sender's email inbox.

Advanced fax solutions

Advanced solutions are available to ensure that whatever your business, there is a Zetafax solution to fit your requirements.

Zetafax can be integrated with a number of common IP telephone switches - removing the need for dedicated fax telephone lines altogether. For enhanced disaster recovery capabilities and easy infrastructure management, Zetafax can be used with popular virtualization platforms, including VMware and Hyper-V.

How Zetafax Device Edition works

Getting started with Zetafax is easy. Simply install the Zetafax software, a fax card and a standard telephone line into an existing server. For virtual server installations, the phone line connects to a Fax over IP media gateway device instead.

Sending faxes

Outgoing faxes can be sent from any printer connected to the Zetafax Server via the Local Area Network (LAN).

Receiving faxes

Incoming faxes are received by the Zetafax Server and sent onward via the email server or to a designated printer.

Faxing with Zetafax Device Edition

Zetafax Device Edition integrates with multifunctional devices through partner applications, such as Kyocera's SmartFax, to make faxing from your printer quick and easy.

Hardcopy faxes are sent directly from multi-functional printers to Zetafax

After sending a fax, Zetafax sends a confirmation receipt to the sender by email
